

Robo Soccer Event

The ECE Department Club in association with IEEE Student Branch conducted Robo Soccer event.

Date: 16th March 2018

The day started with a lot of enthusiasm.

In this particular event the participants were expected to come up with a robust design of a mobile robot that is specialized to play variants of soccer. The variant of soccer included in the event was a normal goalpost which had to be defended by the player's robot from the opponent's robot.

This event got a massive response in terms of participation. There were 27 teams with 100 participants in total competing for the top spot. There were also participants from other colleges like Dayanand Sagar College of Engineering (DCSE).

This incredible event managed to attract a huge number of spectators. The crowd enjoyed the event thoroughly, and so did the participants.

The main aim in organizing this event was to create awareness amongst the students about the technical logics used to create such a mobile robot. This event inspired many students to start working on a mobile robot.

The arena set up for the Robo Soccer Event organised by Department of ECE on 16th March 2018
